**(54) MANUFACTURE OF
BENDING LATTICE
SHAPED SPACER AND
THREE DIMENSIONAL
DOUBLE NET**

(57) Abstract:

PURPOSE: To easily manufacture a three dimensional double net to be used as a bed member for an iron net mortar wall.

CONSTITUTION: A ladder shaped lattice body in a continuous length composed of an upper, a bottom and a tie chord each of which is made of metallic wire, is repeatedly bent while being formed into a folding screen so as to be a spacer 11. Plural spacers 11 are inserted into a space between two flat nets 55 and 44 while being combined with one another, so that a three dimensional double net panel is thereby formed.
